# Introduction

In this document you will find product sheets with the main features of five of the many mind-mapping software tools.

Please bear in mind that the informations are based on the tests carried out, that opinions are personal and that the products analysed are constantly evolving.

Therefore, take them as initial indications that you can freely update according to your own experience.

You will also find an empty form that you can fill in if there is another tool you prefer.

If you have no idea, search for 'mind map solutions' with a search engine, or use a search service for similar software, such as <https://alternativeto.net/> or <https://www.g2.com/>.
