Our Practice in regard to Video Conferencing System

<https://project-reset.eu>

Partners

The following questions help to highlight your practice and can be put in place at your VET to further discussions, reflections and give inspiration at your VET in regard to choosing the best platform for your digital classroom:

- What were the arguments for choosing the current video conferencing system used for our digital classroom?
- Who did choose the video conferencing system for the digital classroom in the first place?
- Are we restricted to the use of one video conferencing system or can we choose from more?
- Do we use the best system for our digital classroom? In other words, how experienced are we as VET-providers in using video conferencing systems?
- Do we as VET-providers look out for new systems or improvements in existing systems that can help improve the backbone of the digital classroom.
- Does GDPR issues restrict the use of some systems? Have the GDPR issues been fixed since we last discussed?
- Are there budget considerations to be made if using or going to use a “payment license” video conferencing system?
- Other challenges in the systems for making it the perfect backbone for a digital classroom?
- Did you find time to properly test and experiment with the system(s) to be used as the digital classroom?
- Continuing education of staff in regard to the video conferencing system?
