# Implementing a Safe and Secure Digital Classroom

<https://project-reset.eu>

## Partners

Below are questions to discuss that can help to regulate and create a safe and secure digital classroom for collaboration. The questions must be regarded as neutral – they are not intended to favor one side:

- Are students allowed to attend the classroom as without the video streaming of them being shown (black screen)?
- How do you comment? Should each student put up a virtual hand to be allowed speaking?
- Do students have to click of audio when they are not talking?
- Do you say "Good morning"/ "Good day" when you log on?
- Is it okay to small talk before the lesson starts?
- Are students allowed to sit in their bed during lessons?
- If students are new to each other how can they get to know each other on a digital platform?
- How is it possible for students to show engagement and enthusiasm if they are sized down in format and in 2D?
- How does a VET-educator tackle students who don't participate actively in the collaboration in the classroom? Some might even be in bed gaming instead – how do you control that?
- How can students get help in the classroom training/teaching/ learning situation from the VET-educator when all other students are following online?
- How do a shy, introvert student manage to engage in the digital classroom collaboration? If there are students with special needs?
- How do we evaluate the digital classroom? And how frequently?
